## Modeling challenges

Latest Submission Grade 100%

trivial system? (Select one)	etric. What metric would give you			
Accuracy				
O Precision				
F1 score				
Recall				
Correct That's right! F1 score is metric.	recommended on skewed data:	sets, as it combines p	recision and recall into one	
On the previous problem abo the disease). Which of these :		if your algorithm is p	rint("1") (i.e., it says everyone has	1/1 po
The algorithm achieves 1	00% precision.			
The algorithm achieves 0	9% recall.			
The algorithm achieves 1	00% recall.			
The algorithm achieves 0	% precision.			
_				
	uld classify everyone as having t			
Negatives. Remember,	recall is the number of True Pos	sitives / (True Positive	is + False Negatives).	
True or False? During error a				1 / 1 pc
recognition application you n	nay have the tags: "car noise", "p and low bandwidth audio, you s	eople noise" and "low	ig. For example, in a speech v bandwidth". If you encounter an ment to assign just one of these	1/1 po
recognition application you n example with both car noise	nay have the tags: "car noise", "p and low bandwidth audio, you s	eople noise" and "low	v bandwidth". If you encounter an	1 / 1 pc
recognition application you n example with both car noise two tags rather than apply bo	nay have the tags: "car noise", "p and low bandwidth audio, you s	eople noise" and "low	v bandwidth". If you encounter an	1/1 pc
recognition application you nexample with both car noise two tags rather than apply to  True  False  Correct That's right! Each exam	nay have the tags: "car noise", "p and low bandwidth audio, you s th tags. uple should have as many tags a te understanding of where your	eople noise" and "low hould use your judge to get a see to get a see t	v bandwidth". If you encounter an ment to assign just one of these	1/1pc
recognition application you ne example with both car noise two tags rather than apply both.  True  False  Correct That's right! Each exam you develop an accurat focus your efforts in re	nay have the tags: "car noise", "p and low bandwidth audio, you s th tags. uple should have as many tags a te understanding of where your ducing the errors.	eople noise" and "low hould use your judge of the properties of the properties of the s is necessary to accu	v bandwidth". If you encounter an ment to assign just one of these enter to assign just one of these enter to assign just one of these enterties. The second in the second	
recognition application you ne example with both car noise two tags rather than apply be True  False  Correct That's rightl Each exam you develop an accural focus your efforts in re	nay have the tags: "car noise", "p and low bandwidth audio, you s th tags.  sple should have as many tags a te understanding of where your ducing the errors.	eople noise" and "low hould use your judge is is necessary to accu errors are coming fro ds:	v bandwidth". Discoloration, because the false false.  Discoloration, because the false false. Scratch defects, because the false.  Scratch defects, because the false.  Work on both classes equivalently the false.  Correct That's right! There is st	hay have the tags: "car noise", "pand low bandwidth audio, you shift and low bandwidth audio, you shift tags.  It is should have as many tags at the understanding of where your ducing the errors.    Accuracy	eople noise" and "low hould use your judge is is necessary to accurerrors are coming from the page of	w bandwidth". If you encounter an iment to assign just one of these irrately classify it. This will help on, which will in turn help you    % of data	1/1pc

	Data augmentation should distort the input sufficiently to make sure they are hard to classify by humans as well. $ \\$
<b>~</b>	GANs can be used for data augmentation.
(	Correct That's right! GANs are one way to generate more images and increase the size of your dataset.
	Data augmentation should try to generate more examples in the parts of the input space where the algorithm is already doing well and there's no need for improvement.
